

THOMSON Go Plus: Mobile, Touchscreen, and Ultra-HD: Innovation at Your Fingertips

THOMSON is redefining the concept of mobile television, making it even more versatile. With the Go Plus, the experience reaches a whole new level thanks to the addition of a touchscreen, transforming the device into a giant tablet. On top of that, its 4K Ultra-HD resolution and sleek metal finish make this TV an ideal solution for both home and professional use.

A Sophisticated and High-Performance Mobile Screen

After the success of the [Go TV](#), the first battery-powered mobile television, THOMSON now unveils the [Go Plus](#), an even more advanced model. This screen features a 32-inch touchscreen, mounted on an adjustable stand with wheels for optimal mobility. Powered by a battery that provides up to 4 hours of autonomy, it can function away from any power outlet. The Go Plus adapts to any situation — whether for entertainment at home or outdoors or for professional presentations.

At Home: Wireless Freedom

Powered by Android, the Go Plus offers Wi-Fi connectivity, allowing users to access all their favorite apps. Live TV streaming is effortless with platforms like Joyn or MyCanal. For on-demand content lovers, streaming services like Netflix, Disney+, Prime Video, and YouTube in 4K are readily available.

Designed for a nomadic lifestyle, this screen can be moved anywhere in the home. Imagine a summer night under the stars watching your favorite show or following a recipe in the kitchen, which you can pause with a simple touch on the touchscreen display. The versatility of the Go Plus makes it an essential companion for all your entertainment needs.

In the Office & Beyond: A Touchscreen Revolution

In a professional setting, the Go Plus stands out for its practicality and flexibility. Thanks to its touchscreen display, this screen can also function as an interactive whiteboard, making it perfect for brainstorming sessions or collaborative workshops. Editing a Word, PowerPoint, or Google Docs document directly on the screen becomes effortless.

With its adjustable height and tilt function, and the ability to switch to portrait mode, the Go Plus is a tailor-made tool that meets various professional needs.

It can also be used in retail stores or at events, allowing audiences to interact seamlessly — browsing a digital catalog, exploring a website, or merging digital and physical experiences in an immersive way.

Elegant Design & Outstanding Performance

The Go Plus is designed with aesthetics in mind. Its champagne-colored metal finish gives it a refined and durable look. The Ultra-HD 4K display ensures exceptional image quality, making it ideal for both watching videos and working on detailed content.
